

## ABSTRACT

A new and distinct variety of plum tree that is characterized by producing a freestone fruit with good dark red coloration and that is ripe for commercial harvesting and shipment August 28-30 in the San Joaquin Valley of Central California. The new variety is closely similar  
5 to the 'Mid Red' plum tree (U.S. Plant Patent 2744) from which it is a bud sport and from which is distinguishable in that the fruit is much larger, has more dark red coloration, has much better flavor and stores exceptionally well, ripening seven days after 'Mid Red' plum fruit.
